

I understand you're soliciting public comments concerning the NAB's petition to stop satellite radio from broadcasting traffic and weather on demand. I got satellite radio mainly for this reason! Local stations don't broadcast 'on demand' and I'm unable to find broadcasts in areas I'm not familiar with. My satellite radio provides a quality and variety that is not available with other stations and I do pay a premium for these services. It's not like it's 'free' like other broadcast channels.

I urge you, the FCC, to reject the NAB's petition 04-160 and support the ability of satellite programmers such as XM and Sirius to provide the kind of programming we ask for and deserve - and PAY FOR!
